CLAIMS

What is claimed is:

1   1.   A method for facilitating color adjustment of imaging data, comprising

2 the steps of:

3   accessing imaging data to be printed;

4   prompting a user to select an area to be adjusted and a color that the area is

5 desired to be;

6   receiving the area and color selections; and

7   adjusting the color of the area as desired.

1   2.   The method of claim 1, wherein the step of accessing imaging data

2 comprises accessing imaging data via a network.

1   3.   The method of claim 1, wherein the step of accessing imaging data

2 comprises retrieving imaging data from a store that is accessible over the network.

1   4.   The method of claim 1, wherein the step of accessing imaging data

2 comprises accessing imaging data through use of an imaging extension.

1   5.   The method of claim 4, wherein the imaging extension comprises part

2 of a user browser.

1   6.   The method of claim 4, wherein the imaging extension comprises part

2   of a network-based service.

1   7.   The method of claim 1, wherein the step of receiving the area and color

2   is facilitated by presenting a representation of the imaging data to the user.

1   8.   The method of claim 1, wherein the step of adjusting the color

2   comprises changing the area to a specific named color.

1   9.   The method of claim 1, further comprising the step of storing the

2   adjusted imaging data in a store that is accessible over a network.

1   10.   The method of claim 1, further comprising the step of storing the

2   adjusted imaging data within memory of a printing device that is to be used to print

3   the adjusted imaging data.

1   11.   The method of claim 1, further comprising the step of facilitating

2   printing of the adjusted imaging data.

1   12.   A system for facilitating color adjustment of imaging data, comprising:

2   means for accessing imaging data to be printed;

3   means for receiving area and color selections from a user; and

4   means for adjusting the color of the area as desired.

1   13.   The system of claim 12, wherein the means for accessing imaging data

2   comprise means for retrieving imaging data from a store that is accessible over the

3   network.

1   14.   The system of claim 13, wherein the means for retrieving imaging data

2   comprise an imaging extension.

1   15.   The system of claim 14, wherein the imaging extension comprises part

2   of a user browser.

1   16.   The system of claim 14, wherein the imaging extension comprises part

2   of a network-based service.

1   17.   The system of claim 12 wherein the color comprises a specific named

2   color.

1   18.   A network-based service that is configured to facilitate adjustment of

2   the colors of imaging data, comprising:

3   logic configured to access imaging data to be printed;

4   logic configured to receive area and color selections of a user; and

5   logic configured to adjust the color of the area as desired.

1   19.   The system of claim 18, wherein the logic configured to access
2   imaging data comprise logic configured to retrieve imaging data from a store that is
3   accessible over the network.

1   20.   The system of claim 18, wherein the logic configured to access
2   imaging data comprise an imaging extension.

1   21.   The system of claim 20, wherein the imaging extension comprises part
2   of a user browser.

1   22.   The system of claim 20, wherein the imaging extension comprises part
2   of a network-based service.

1   23.   The system of claim 18 wherein the color comprises a specific named
2   color.
